CONTROL YOUR DATA WITH FRONTMATEC SAFE-BACKUP

Do you have control of your data, and have you considered how to restore your system in the event of a breakdown or hacker attack? Often, the backup is located locally and typically in the same place as the server. This gives you faster access to your data, but if something goes wrong, it may not always be optimal. Several of our customers have experienced losing their backup due to hardware failure, theft, fire, water damage, or hacker attacks.

We suggest a fast and efficient solution!

If you want to be able to get back on track quickly if something goes wrong, safe backup is the right solution for you. Restoration of your system is also possible in our data center, minimizing downtime, and you will quickly regain access and control over your process plant.

Backup without manual processes

Automatic backup of your system is done at least once a day, and you won't even notice it. Files are transported from your plant to our data center through encrypted traffic. We store your data confidentially in accordance with GDPR, and you will always have the option to retrieve them.

Frontmateg safe-backup gives you:

- Rollback and cross-check of data
- Operating options in the cloud
- Handpick single files or restore your entire machine as desired.
- Our Safe backup is subscription-based, so you avoid binding in hardware that is with you.
- Upon termination, all data is handed over to you.
